Category:People from South DakotaQ: Unable to configure a firewalled server for PHP-FPM in nginx I have a dedicated server running Ubuntu Server 14.04 LTS. I'm trying to run PHP-FPM with nginx, however I'm getting the following error: 2014/05/18 14:16:03 [emerg] 1#1: recv() failed (104: Connection reset by peer) in FastCGI: event.c:349 2014/05/18 14:16:03 [emerg] 1#1: server timed out (110: Connection timed out) while reading response header from upstream, client: 127.0.0.1, server:, request: "GET / HTTP/1.0", upstream: "fastcgi://unix:/var/run/php5-fpm.sock:", host: "my.dev.ip.here:80" Looking at the error message and having read a lot of threads on the topic I think there is something about my server. Here is what I currently have in nginx.conf: user www-data; events { worker_connections 1024; } http { upstream php5-php-fpm { server unix:/var/run/php5-fpm.sock; # we needed this to make sure we were using the correct socket keepalive 20; } server { listen 80 default deferred; listen [::]:80 default deferred; server_name my.dev.ip.here my.dev.ip.here:443 ssl; ssl_certificate /etc/nginx/ssl/example.crt; ssl_certificate_key /etc/nginx/ssl/example.key; access_log /var/log/nginx/dev.access.log; error_log /var/log/ f678ea9f9e
